## 1.过程描述

### 1.1 Complication

The core predicament of medicine—the thing that makes being a patient so wrenching, being a doctor so difficult, and being a part of a society that pays the bills they run up so vexing—is uncertainty.

医学中存在着各种各样的不确定

In recent years, we in medicine have discovered how discouragingly often we turn out to do wrong by patients. For one thing, where the knowledge of what the right thing to do exists, we still too frequently fail to do it. Plain old mistakes of execution are not uncommon, and we have only begun to recognize the systemic frailties, technological faults, and human inadequacies that cause them, let alone how to reduce them. Furthermore, important knowledge has simply not made its way far enough into practice

正是由于各种不确定性，医生注定会犯各种各样错误

It is because intuition sometimes succeeds that we don't know what to do with it. Such successes are not quite the result of logical thinking. But they are not the result of mere luck, either.

直觉有时候会发挥十分重要的作用，但必须以足够的经验作为支撑

## 2.结果输出

今天下午把complication一书看完的，原本预计晚上要么看一本其它的，要么继续数据结构的学习，结果跟爸妈聊了会天、看了会视频之后就快十一点了。关在寝室中总感觉时光飞逝，而自己又没做成点什么东西。今天五一就当放个假，之后继续加油吧。
